

EJ Ejector Buckets

Hydraulically Eject Loads

Solve Dump Height Problems

Rockland EJ Ejector Buckets are ideal for precise dumping applications, sticky materials, or overcoming dump clearance issues in tight spaces. Ejector Buckets increase standard dump height a minimum of 24". The hydraulically driven push plate allows the operator to maintain maximum control while dumping his load. Rubber skirting ensures a clean bucket after every dump. Whether you're mixing ingredients in the feed yard, or overcoming dump clearance issues, the Rockland Ejector Bucket is right for your application.

Rockland EJ Ejector Buckets are built with rugged high-strength, weight-saving, alloy steels. Each heavy-duty cylinder is made in-house, hydraulically cushioned, and rigorously tested before shipment. These buckets are designed and manufactured for years of maintenance free, dependable service.
