

ED EXCAVATOR DOZER BLADES

Do more with your excavator.

Excavator dozer blades make sense because they make it possible for excavators to backfill and level efficiently. They also help stabilize the machine when digging.

Rockland ED Excavator Dozer Blades come complete with push frame, lift cylinders, and attaching brackets. The rugged, box-frame moldboard and the push frame are built entirely of high-strength, weight-saving alloy steels. The heavy-duty hydraulic cylinders feature hardened, chrome-plated rods and high-pressure seals. Installation is as easy as welding on four mounting brackets and running hydraulic control lines to the two lift cylinders.
