

# TS Transfer Station Bucket

**LOAD, CARRY, AND DOZE!**

**Extra height sets your loader up for the big push!**

Rockland TS Transfer Station Buckets are used all over the world in transfer stations and landfills because they combine maximum load capacity with the ability to doze. These unique, dual purpose buckets really get the most out of loaders that need to spread, load, and doze. The extra height of the TS bucket dramatically increases dozing capacity and keeps trash from spilling back over the top onto the machine. The short bottom increases dump heights and helps the TS bucket load faster and easier.

## Built to Last

Rockland Transfer Station Buckets are built tough for years of dependable service. The entire bucket is built of high strength, weight saving, alloy steel so your TS bucket will be at work - not in the maintenance shop. TS buckets were designed to perform and built to last. When you specify a Rockland TS Transfer Station Bucket you will be covered by the best warranty in the business.

## Options

Rockland TS Transfer Station Buckets can be customized for any application. Reversible bolt-on edges are standard, and rubber bolt-on edges are an option. Bolt-on skid shoes and additional wear plates are also available for severe service applications.

# Doze, load, and carry like no other bucket!

The high visibility spillguard makes it possible for the operator to see what is in the bucket so the extra height is not an obstacle to productivity. If you have to move a lot of trash in a variety of ways, don't consider any other tool.
