

# SNOW BUCKETS

**LOAD MORE SNOW EVERY PASS**

## SNOW BUCKETS MAKE SENSE

Snow buckets make sense because they move more snow in less time. A loader with a standard factory bucket is simply not an efficient snow removal machine. Snow often has to be removed in a hurry. By mounting a Rockland snow bucket on your loader, you can double productivity and dramatically reduce snow handling expenses.

**SNB**

### SNB SNOW BASKETS

The Rockland SNB Snow Baskets are large and light. The open frame basket design makes them ideal for loading lots of light new snow, yet they are tough enough to handle packed, piled snow as well.

The SNB baskets are built entirely of high-strength, weight-saving alloy steel for years of dependable snow loading. The SNB baskets are equipped with reversible bolt-on edges. If your application favors a snow basket design, specify a Rockland SNB Snow Basket for snow removal productivity.

**SNO**

### SNO SNOW BUCKETS

The Rockland SNO Snow Buckets are also large and light, but they are a more conventional bucket design for easy loading action. The SNO buckets are ideal for digging and loading large amounts of piled and packed snow. It is tough enough to dig old piles of snow with heavy concentrations of ice.

The SNO buckets are built of high-strength, weight saving alloy steel, and feature a slope bottom design with replaceable skid shoes that keep the bucket bottom off the pavement to reduce bottom and corner wear. The SNO buckets are equipped with reversible bolt-on edges. For a tough snow removal application, specify a Rockland SNO Snow Bucket to turn your loader into an efficient snow removal machine.
